- c. a diagnosis grouper for generating at least one diagnosis group by grouping diagnosis records with similar said diagnosis information from said patient group;
- d. an episode analyzer including:
 - i. a probability analyzer for performing probability calculations that are capable of generating a value that is proportional to a probability that shows whether at least two of said multitude of diagnosis records being used as input entries belong to a single episode, wherein said episode is a group of diagnoses on the same patient that describes the course of a given illness ~~and wherein said episode is not healthcare provided services, and wherein a single probability~~ calculation:
 - a. operates on a pair of said diagnosis records;
 - b. is a function of:
 - i. a similarity value, said similarity value representing the similarity between said pair of said diagnosis records; and
 - ii. a time between diagnosis value, said time between diagnosis value representing the time between said pair of said diagnosis records; and
